

# word processor P5003

versatile... efficient  
...and a pleasure to work with

Business  
Systems

**PHILIPS**

Philips  
Word Processor

# P5003

In recent years, Word Processing has caused a dramatic change in the business world, particularly in offices with a high volume of paperwork or where speed and quality of typing are of great importance. Because word processing is a highly efficient and cost-effective technique for producing typed documentation. Letters, reports, and other documents can be originated, edited, revised, altered in format and reproduced, all with incredible ease, and extremely rapidly. And the finished product is of the highest possible quality.

Word Processing also simplifies procedures which are normally difficult or costly to carry out, such as personalizing letters and filling in forms. And it makes filing and recalling information from files so simple and convenient.

As a result, management enjoy the reward of increased productivity, fast turn-around and improved quality. Which not only means considerable cost saving, the company image is much improved as well. Staff benefit from easier working with less routine, less repetitive work, and a more enjoyable working environment.

Philips, one of the world's leading suppliers of all kinds of office equipment and systems, have an in-depth, first-hand knowledge of office working procedures and requirements. This experience and know-how contributed significantly towards the successful introduction of our first Word Processor, the P5001, a magnetic card system with many features and outstanding ease of operation.

A natural follow-up and complement to the magnetic card system was the Flexible Disk Word Processor P5002, which has even more features and facilities, many of them unique to Philips. And it still offers amazing operational simplicity.

...the flexible addition  
to a distinguished  
family

Now there is the P5003, an improved version of the highly successful P5002, with even greater versatility and flexibility. All relevant programs are stored in the working memory of this Word Processor. Not only does this mean that each function is instantly available when needed, it also enables multiple tasks to be carried out simultaneously. The scope of the P5003 has been extended as well, through the introduction of several Data Communication packages, which are becoming increasingly important in today's business world. The P5003 also includes a number of design modifications which considerably enhance ease of operation and user comfort.

# Increased efficiency, versatility and operational ease and comfort

## Extremely versatile - yet so easy to use

The Philips P5003, with its high-capacity, flexible disk storage, is an exceptionally versatile word processor. As well as the facility to originate, revise and reformat texts, the P5003 has an unusually wide range of exciting operational features, many of them unique, which simplify and speed up the typing, filing and sorting of all kinds of documents. This versatility is largely due to multi-tasking and the fact that the system and application software are not limited by being permanently built in. Instead they are stored on flexible disks. A combination of various programs is loaded into the program memory in one process. Each of the stored functions is then constantly available and can be instantly called up when required. Because of this and the multi-functioning capability of the P5003, several different tasks can be performed simultaneously. The operator can, for example, prepare an urgent report, or work out calculations on tables of figures, while the word processor is automatically selecting addresses and typing out personalized covering letters. If so desired, it can even send and receive information via the telephone (Data Communication). All of these tasks can be done at the same time.

For all its outstanding versatility, the P5003 is extremely easy to operate. The keyboard, for example, has the standard typewriter layout with separate function keys. The use of mnemonics for keying in commands makes operation quick and easy. Touch typing can be used for command sequences, and the operator can easily memorize command sequences.

## Full control with the VDU

The operational simplicity of the P5003 becomes more evident when you look at the VDU screen. To start with, the characters are large, sharp and clear, and the brightness is adjustable so the

operator can set it for maximum comfort. At the top of the display area, three lines are reserved for status information. These provide the operator with a constant visual reference to what is happening, confirming the mode chosen, and reminding the operator of parameter settings such as tabs, margins, pitch, and so on. The status information also gives the line and column numbers of the cursor position. The cursor is a flashing underscore which indicates on the screen where the next character to be keyed in will appear.

At any time, the screen can display 28 lines of text with up to 80 characters per line. However, the system can memorize much larger documents, extending to a full 249-character width or up to 94 lines of text. By means of scrolling, the screen can be made to display any part of a large document.

## Non-stop typing

Typing on to the screen is an incredibly simple and speedy process, because it's just like typing one long continuous line. Moving to a new line is done completely automatically on the screen and without breaking words. And while it is possible to correct mistakes simply by backspacing and overtyping, corrections can just as easily be done after the main text has been typed on the screen, together with all other editing operations.

## Filing simplicity

The flexible disk, with its capacity to store as many as 128 pages of text, each page equivalent to a typed A4 sheet, provides the facility to file frequently-used terms, text passages, mailing lists, classified and statistical information. Each item is filed under its own user-definable name, consisting of up to 12 characters specified by the operator.

A complete index of all filed items including page numbers can be

displayed on the screen, so the operator can see at a glance the contents of any disk. With the index on the screen, files and file pages can be renamed, renumbered, deleted or rearranged as required, without actually going into the files themselves.

Another facility of the P5003 is the possibility to have a "deletedpages" file. Any page or document that is deleted is automatically stored in this file and can be retrieved should the need arise.

## Dual disk drive units

The two disk drive units of the P5003

can be used together or independently. This gives greater flexibility of operation and provides the operator with more systems combinations. It is possible for information to be duplicated from one disk on to another. This can be carried out while other tasks are in progress. The disks used with the P5003 are fully compatible with those for the P5002. Operations involving the disks, such as search, sorting, duplication etc., are done at a higher speed on the P5003.

## High quality printing

Typed documents are produced to a very high standard using a high-quality

daisywheel printer which prints at 45 characters/second in both directions across the paper. A wide choice of typestyles are available on interchangeable daisywheels, which the operator can remove and replace in seconds. Pitch and line spacing can also be set by the operator. And a neat, error-free print-out is obtained first time. The printer further contributes towards increased productivity and simplification of operator tasks through its ability to print multipage documents automatically. Both single sheets and continuous form paper can be used, and the offset at the top of each page and type limit (i.e. the number of lines

per page) can be preset with the P5003. An optional sound cover is available which matches the elegant design of the system. Printing versatility can be substantially increased using the optional wide track and dual head printers.

A standard typewriter keyboard is used for typing text on to the screen of the VDU (Video Display Unit). The keyboard and VDU are separate, and independently adjustable, for maximum operator convenience.

Flexible disks provide a high-capacity, yet compact and easily accessible storage/retrieval medium for filing finished documents and frequently-used standard information. A program disk is used for loading the system program.

By means of dual disk drive units, information can virtually instantaneously be recorded on to or recalled from the flexible disks. Information can be sent and received via the telephone (background function) while the operator carries out other tasks (foreground function).

Printing on to paper is done by a high-quality, high-speed, character printer which will accept information from the VDU screen, flexible disk or even direct from the keyboard. Printing from the flexible disk can be carried out without interrupting other tasks.

# P5003... convenience, quality, improved communication

With the Philips P5003 Word Processor, complex and repetitive tasks become simpler and more convenient to do; the finished product is always of the highest possible standard; and, consequently, communication objectives are achieved much more effectively, and the user's company image is improved. On this and the next few pages, we have included a number of examples to illustrate how these important practical benefits are reached through the many operational features of the P5003.

## Revision

The example on this page shows just how easily text can be corrected, revised and changed in format. At the top is the original draft of a letter on which the editor's comments have been incorporated. Below it is the final revised print-out. To obtain this result, the following functions were applied to the original text on the VDU screen:

**Correction:** "p" was changed to "o" by simply overtyping.

**Moving:** the second paragraph was moved to a new position.

**Insert:** "e" was added to "some" and "Processing" was inserted; the text automatically makes room for the insertion and closes up again afterwards.

**Indented paragraph:** the cursor was used to specify new left and right margins for the third paragraph; and following the "format-paragraph" command, rearrangement of the whole paragraph took place instantaneously.

**Underline:** using this command function, the whole paragraph was underlined automatically.

**Delete:** the word "and" was deleted and the text closed up automatically.

Mr. James Brown  
159 High Street  
Windsor, Berkshire

Dear Mr. Brown,

At the conclusion of our meeting last Tuesday, <sup>you</sup> requested that I put in writing to you <sup>some</sup> of the advantages of the Philips Word Processing System.

Routine letters, memos, reports, figures, contracts and personalized letters... the P5003 assures you fast turnaround on anything typed. You always get back clean, neat, finished copy, all text perfectly spaced ~~and~~ and paragraphed, while the subject is fresh in your mind.

The P5003 combines reliable computer technology with the versatility of a visual display screen. This enables you and your typist to cut through those mountains of paperwork in a fraction of the time normally required by electric typewriters and conventional filing systems.

On the following pages are listed some of the applications for the P5003 and how they can benefit your company.

Yours sincerely,

Mr. James Brown  
159 High Street  
Windsor, Berkshire

Dear Mr. Brown,

At the conclusion of our meeting last Tuesday, you requested that I put in writing to you some of the advantages of the Philips Word Processing System.

The P5003 combines reliable computer technology with the versatility of a visual display screen. This enables you and your typist to cut through those mountains of paperwork in a fraction of the time normally required by electric typewriters and conventional filing systems.

Routine letters, memos, reports, figures, contracts and personalized letters... the P5003 assures you fast turnaround on anything typed. You always get back clean, neat, finished copy, all text perfectly spaced and paragraphed, while the subject is fresh in your mind.

On the following pages are listed some of the applications for the P5003 and how they can benefit your company.

## Tabular formats

Flexible tab settings and the ability to handle wide pages with up to 249 characters per line make the preparation of clean and tidy tabular information a simple matter, as this example shows.

**Decimal alignment:** the decimal alignment mode simplifies and speeds up the task of typing columns of figures; the operator simply keys in what is seen and the decimal point is allowed for automatically.

**Moving columns:** it is very easy to move columns of information with the P5003. Once the column, or any part of it, has been defined in terms of its margins, it can be moved with the cursor in any direction across the screen. So even tabular information can easily be revised or rearranged.

## Formatting

The P5003 provides outstanding flexibility in text layouts, and this is particularly useful in the preparation of forms and reports. Lists or paragraphs of text can be adjusted quickly and easily to obtain a cleaner, neater presentation, or simply to add emphasis to particular sections.

**Centering:** any amount of text can be automatically centered between the margins with a single command.

**Hyphenation:** in hyphenation mode, each line is checked automatically and possible word breaks are highlighted; the operator can accept or amend suggested word breaks.

**Justification:** text, including sub-paragraphs, can be printed with the right-hand margin automatically justified, if so desired. This function can even be applied to single lines or paragraphs.

The central attribute of words in communication is manoeuvrability - the endless ways in which they can be combined to carry ideas, messages, and information to every sphere of organised activity.

It is therefore surprising to find that the first draft is often a final draft. Making a text more effective by altering a few words is left undone because the whole document would have to be re-typed. Effective communications are sacrificed to the limitations of conventional technology.

The P5003 responds to the intrinsic manoeuvrability of language by never freezing words on paper until every revision has been accomplished. Formats can be varied until YOU find the one that gets YOUR message over most SUCCESSFULLY.

### ARMED AIRCRAFT

1. If a visiting aircraft lands in an armed condition, no attempt will be made to disarm or unload it. The aircraft must be parked on the airfield in the safest possible location and the pilot will ensure that all armament switches are OFF before leaving aircraft.

2. An armed aircraft which is parked must be suitably marked with signs to warn personnel of the danger.

### GROUND SAFETY PINS

3. A complete set of safety pins and locks for the aircraft responsible for the safety of the aircraft.

(a) Cannon pin.  
(b) D-ring (ion) safety gear.  
(c) Nose gear.

### ARMED AIRCRAFT

1. If a visiting aircraft lands in an armed condition, no attempt will be made to disarm or unload it. The aircraft must be parked on the airfield in the safest possible location and the pilot will ensure that all armament switches are OFF before leaving aircraft.

2. An armed aircraft which is parked must be suitably marked with signs to warn personnel of the danger.

### GROUND SAFETY PINS

3. A complete set of ground safety pins and locks is carried in the aircraft. It is the pilot's responsibility to ensure that all the pins and locks are in place before he leaves the aircraft.

### AVION ARME

1. Si un avion visiteur se présente armé, aucune mesure ne doit être prise pour le désarmer ou le décharger: l'avion sera parqué sur le terrain dans la meilleure position possible de sécurité, et le pilote devra s'assurer avant de quitter l'avion que tous les interrupteurs d'armement sont sur OFF.

### AVION ARME

1. Si un avion visiteur se présente armé, aucune mesure ne doit être prise pour le désarmer ou le décharger: l'avion sera parqué sur le terrain dans la meilleure position possible de sécurité, et le pilote devra s'assurer avant de quitter l'avion que tous les interrupteurs "Armement" sont sur OFF.

2. A titre de précaution supplémentaire, tout avion visiteur armé devra être convenablement signalé à l'attention du personnel.

3. Un ensemble complet de sécurité au sol sera placé sur chaque avion. C'est le pilote qui est responsable de ce travail. Les interrupteurs d'armement doivent être rangés dans leur boîte à l'arrivée de l'avion.

### GOUPILLES DE SÉCURITÉ AU SOL

1. Un ensemble complet de sécurité au sol sera placé sur chaque avion. C'est le pilote qui est responsable de ce travail. Les interrupteurs d'armement doivent être rangés dans leur boîte à l'arrivée de l'avion.

2. A titre de précaution supplémentaire, tout avion visiteur armé devra être convenablement signalé à l'attention du personnel.

3. Un ensemble complet de sécurité au sol sera placé sur chaque avion. C'est le pilote qui est responsable de ce travail. Les interrupteurs d'armement doivent être rangés dans leur boîte à l'arrivée de l'avion.

### Dispersion equations

The dispersion equations follow from a substitution of the perturbed particle and current densities, derived in Section 7, into the Maxwell equations in the  $\theta$ -representation. The latter equations are obtained from Eq. (3.9) after the application of the operator  $P_\alpha$  (see Eq. (5.2) and of the radial expansion (5.11).

Substituting the perturbed particle densities (7.2) and (7.15) into Poisson's equation  $k^2(1+k_S^2)\phi_\alpha = 4\pi e(n_{i\alpha} - n_{e\alpha})$ , we get

$$-\frac{T_e k^2}{4\pi n_e} \chi (1+k_S^2) \phi_\alpha =$$

$$\frac{T_e}{T_i} \frac{T_i}{T_e} + 1 - \Gamma_o + \frac{\omega_{*i}}{\omega_\alpha} \Gamma_o (1-n_{iM}) - \frac{\omega_{Di}^{(1)}}{2\omega_\alpha} \Gamma_o (C_1 + C_2)$$

$$+ \frac{\omega_{Di}^{(2)}}{2\omega_\alpha} \Gamma_o C_2 (\bar{\phi}_\alpha + (1-\frac{\omega_{*e}}{\omega_\alpha}) \bar{\psi}_\alpha + \bar{N}_\alpha$$

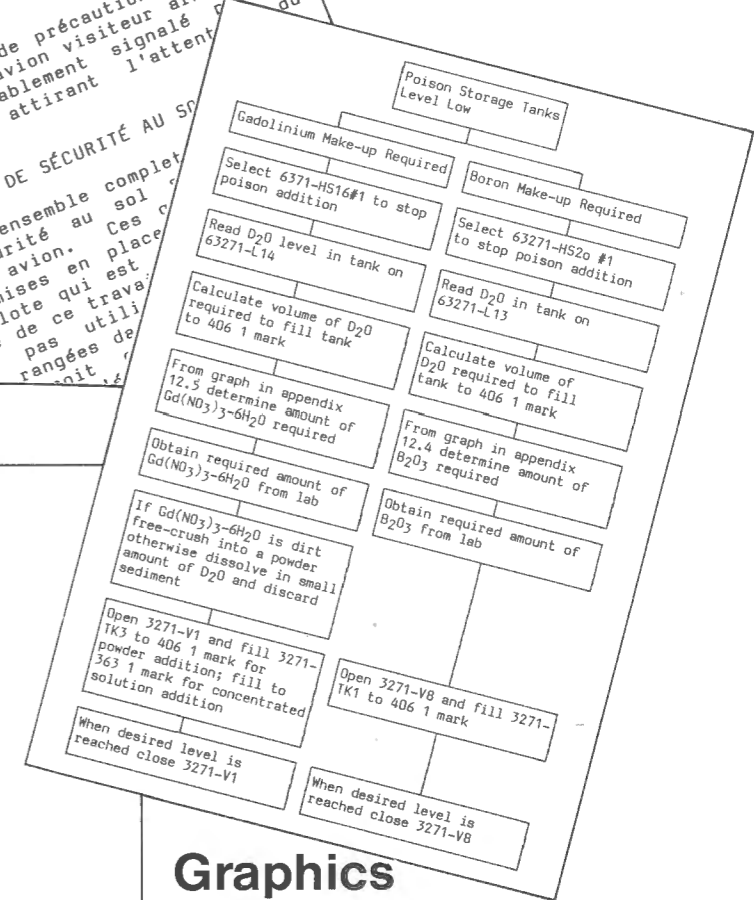

$$+ \frac{T_e - 1}{m_i \omega_\alpha^2} \frac{d}{d\theta} \frac{\Gamma_o C_1}{J} \frac{d}{d\theta} \frac{\Gamma_o C_3}{B^2 J} (\bar{\phi}_\alpha + \bar{\psi}_\alpha) + i \frac{T_e}{eB} \frac{\Gamma_o C_3}{b} k_\chi (1+k_S^2) \bar{\lambda}_\alpha \psi_\alpha \quad (8.1)$$

Differentiating the Maxwell equation  $k^2(1+k_S^2)\bar{\lambda}_\alpha = (4i/c)(J_{e\alpha} + J_{i\alpha})$  with respect to  $\bar{\theta}$  and subsequently using Eq. (7.5), we obtain

$$\frac{ic}{\omega_\alpha} \frac{d}{d\theta} \frac{k^2(1+k_S^2)}{JB^2} \frac{d}{d\theta} \bar{\psi}_\alpha = \frac{4\pi}{c} \frac{d}{d\theta} \frac{J_{e\alpha} + J_{i\alpha}}{B}$$

## Multiple margins

Multiple left and right margins allow formation of up to nine separate and independent columns of continuous text. Each column can be treated on the screen like an individual page; text can be revised, adjusted, changed in format, and even printed justified. So multi-column documents, for example different language versions as shown here, can easily be prepared and revised without affecting each other.

## Graphics

A particular advantage of the P5003 is its ability to draw lines. Flow charts, block diagrams and other graphics can be constructed with remarkable ease and versatility. Text sections can be done either before or after the graphics.

**Sub and superscripts:** this example also demonstrates the ability of the P5003 to handle sub and superscripts. This can save time and guesswork in the preparation of technical or scientific documents and reports.

**Formulae:** printing of complex scientific formulae together with normal text is facilitated by the dual head printer.

**Record processing:** this facility enables several different kinds of documents to be prepared from one set of data. For example, a tax consultant can, from the stored record of any particular client, quickly obtain a variety of completed documents - like a tax declaration form, a bill, a contract, etc. - all fully automatically.

**Personalized letters:** the P5003 can also save a great deal of time and money in the production of multiple letters. This makes it ideal for direct mail applications or where large numbers of personalized letters have to be produced.

The operator simply prepares the standard letter text on the VDU screen including codes instead of variables such as the recipient's name and address. All the different names and addresses are filed on a flexible disk. Using this disk, and with the appropriate command, the P5003 can be made to:

- print automatically all the required name and address labels;
- type automatically, on single sheets on continuous form paper, all the letters, substituting the various names and addresses for the codes in the standard letter.

In this way, the P5003 automatically relieves the operator of a time-consuming, boring task. Furthermore, the name, address and contents of each letter are all printed in one go, giving a clean impressive and more personal result, each letter having the appearance of being individually typed.

The Floppy Diskette has become the accepted way to store data in operator-friendly minicomputers. Ease of use and speed of operation are the two most persuasive reasons. A P5003 operator is able to recall any one of 254 pages to the CRI screen almost instantaneously, and an infinite number of pages can be made available in the few seconds it takes to load a new Diskette.

Hard wearing and hard working, the Floppy Diskette is a near-perfect solution to information storage in the Office. The Diskette is robust enough for mailing from one department to another, and, with a little handling care, should continue to offer a high standard of service for a number of years.

The P5003 handles the file organisation from the moment a page of data leaves the CRI screen in response to an operator instruction. All the operator has to do is specify a Textname and a Page Number. The system will place the page on the Diskette and create an entry in the index for easy reference at any future time.

Security is assured by a sophisticated Diskette organisation that presents a degree of flexibility usually associated only with large computer systems. Access is genuinely Random, which accounts for the very fast store and recall times. Texts are stored in packed form which means that the customer can exploit every sector of available Diskette storage to the full. Index duplication, the Deleted Pages facility, Updating by opening a new page rather than overwriting the old - all these features give added resilience to Floppy Diskette storage on the P5003.

The Flexible Disk has become the accepted way to store text in operator-friendly minicomputers. Ease of use and speed of operation are the two most persuasive reasons. A P5003 operator is able to recall any one of 254 pages to the visual display screen almost instantaneously, and an infinite number of pages can be made available in the few seconds it takes to load a new Disk.

Hard wearing and hard working, the Flexible Disk is a near-perfect solution to information storage in the Office. The Disk is robust enough for mailing from one department to another, and, with a little handling care, should continue to offer a high standard of service for a number of years.

The P5003 handles the file organisation from the moment a page of text leaves the visual display screen in response to an operator instruction. All the operator has to do is specify a Textname and a Page Number. The system will place the page on the Disk and create an entry in the index for easy reference at any future time.

Security is assured by a sophisticated Disk organisation that presents a degree of flexibility usually associated only with large computer systems. Access is genuinely Random, which accounts for the very fast store and recall times. Texts are stored in packed form which means that the customer can exploit every sector of available Disk storage to the full. Index duplication, the Deleted Pages facility, Updating by opening a new page rather than overwriting the old - all these features give added resilience to Flexible Disk storage on the P5003.

**Library:** as well as filing names and addresses, disks can be used to store standard passages of text and frequently-used or complicated terms such as those used in the legal and medical professions. The library function considerably simplifies and accelerates the composition of standard documents.

**Glossary:** an index of words or terms recurring throughout a document can be generated and filed along with the page and line numbers in which they occur.

## Global replace

A unique facility of the P5003 is its ability to search an entire document for as many as 18 specific words or phrases at the same time, and to replace them wherever they occur with pre-defined alternatives, all fully automatically. Updating bulky documents, such as stock lists or operating manuals, is no longer a costly, time-consuming exercise with this facility. In the passage of text shown here, for example, "Floppy" has been replaced by "Flexible", "Diskette" by "Disk", "CRT" by "visual display" and "data" by "text", all in one go.

**Locate:** in this mode the P5003 is used to locate one or more specified words in a page of text.

**Replace:** this semi-automatic facility is similar to locate; when the word being searched for is located, the operator is given the option whether or not to implement a replacement.

# Extensive capabilities

- Text preparation on screen
- Permanent display of format, mode and status messages
- Display of prompts to guide the operator
- Left and right indented paragraphs
- Sophisticated revision facilities
- Fast cursor movement
- Paragraph and page reformatting
- Subscripts and Superscripts
- Centering of text between margins
- Hyphenation semi-automatic
- Decimal alignment automatic
- Multiple margins, nine independent columns of text
- Column move and exchange
- Search for specified words or phrases
- Replacement of specified words or phrases, semi-automatic or automatic
- Repagination, semi-automatic or automatic
- Format storage with files
- Flexible filing with user-definable text names
- 128 pages per flexible disk max.
- Automatic index
- Duplication of files
- Deletion of files
- Automatic re-use of disk-space after deletion
- "Deletedpages" facility
- Global replace of up to 18 different words or phrases
- Simultaneous printing - text preparation - storing - recalling of files
- Right justify printing
- Bold printing
- Multiple pitch printing
- Multiple linespacing
- Automatic headers/footers
- Automatic footnote tie-in
- Adjustable offset
- Adjustable typelimit - formfeed
- Graphics for horizontal and vertical lines
- Library for fast recall of frequently-used text items
- Compilation of glossary of important words or phrases with page index
- Automatic merging (serial letters)

- Forms filing
- Sorting
- Arithmetics
- Keystroke memory

## Efficiency where it's needed

### Personnel administration:

Job applications, employment contracts, salary revisions, testimonials, etc.

### Accounts

Invoices and reminders for payment, changes in conditions of payment, etc.

### Sales

General information, offers, order confirmations, reclamations, direct mail, confirmation of visit, etc.

### Export

Foreign language correspondence, etc.

### Purchasing

Orders, delivery inquiries, complaints, requests for information and quotations, etc.

### Works organization

Working plans, programmes, memos, etc.

### Banking

General banking correspondence, direct mail, import/export correspondence, circular letters, etc.

### Insurance

General information, quotations, correspondence about claims, etc.

### Local and national government

General information, building conditions, legal explanations, tenders, etc.

### Medicine

Diagnoses, reports, etc.

### Lawyers, patent offices, business consultants, accountants, registry offices

Contracts, financial statements, accounting reports, professional advice, notifications, test reports, court records, etc.

### Estate agents

Quotations, property descriptions, etc.

### Architects and engineering consultants

Project descriptions, tenders, etc.

### Publishing

Advertising and subscription promotion, replies to readers' letters, etc.

## Making the most of the P5003

The versatility of the P5003 Word Processor can be even further extended - and productivity increased - with the aid of a wide range of optional accessories that includes both hardware and software. These accessories can easily be installed in the field, so that new and existing users of the P5003 can build up systems to match requirements, systems that can be extended as needs grow. Users can also take advantage of the new options and accessories which are continuously being developed. Through the use of program disks, obsolescence is virtually eliminated.

## Configurations

**Standard system** with two flexible disk stations and 45 cps printer

**Satellite system** with two flexible disk stations, without printer

## Software options

Programs are loaded from flexible disk. Various selections from the following program packages can be combined on one disk.

The most powerful package "Pack III" contains all Word Processing functions, Record Processing functions, Sort and Arithmetics functions and the powerful Keystroke Memory.

### Record processing

Easy maintenance of files  
Selective recall of files  
Production of multiple documents from records  
Non-linear merge for serial letters

### Sort

Automatic sort in 9 columns  
Sort in ascending or descending order  
Freely definable priorities  
Sorting complete disk contents

### Arithmetics

Application of basic calculations to columns or lines of figures  
Storage of multiple commands for calculations  
Calculator type addition, subtraction, multiplication and division of fixed point figures

### Keystroke memory

Automatic memorizing of keystroke sequences for user programming  
Repetitive execution, at the touch of a key, of memorized sequences  
Storage of up to 10 sequences

### Paragraph selection package

Fast assembly of letters and documents from pre-recorded paragraphs  
Automatic insertion mode for variables  
User-definable selections  
Combined with Arithmetics and Keystroke Memory

### User-programmable package

Easy to use programming in BASIC, Microsoft® 5.03 BASIC, extended version  
Flexible use of text and data files

### Data communication packages

Asynchronous communication  
Synchronous communication  
Communication between Word Processors (P5003 to/from P5003 or P5002)  
Telex punch output

More detailed information on software packages is contained in separate data sheets available on request.

## Hardware options

### 55 cps printer

Increased printing speed for high-volume applications

### Rear out-of-paper detect

For continuous stationery and unattended operation  
Stops printer at end of page, when paper supply is interrupted

### Forms tractor

For continuous stationery  
Pulls paper accurately through printer  
Adjustable sprocket distance between 50 mm and 355 mm

### Single sheet feeder

Installable on top of printer  
Automatically inserts new sheets  
Stores printed pages in tray

### Wide track printer

Wide platen for paper up to 711 mm or 28"  
Maximum line length 249 characters

### Sound cover

Virtually eliminates printing noise (reduces sound level by approx. 25 dBA)  
Designed to match P5000 family  
Opens for easy access to printer and paper  
Option for use with Single Sheet Feeder

### Shared printer facility

Use of one printer for two systems (same office)  
Printing on "first come - first served" basis

### Executive work station

Second screen/keyboard combination for alternative use  
Work station for originator or manager

### Serial controller

Interface board for:  
- data communication  
- telex punch

More detailed information on hardware options is contained in separate data sheets available on request.

## Sort

Columns of information can be automatically rearranged in alphabetic or numeric sequence, either in ascending or descending order. The operator simply specifies the ordering details for each column and column priorities. In this example, the information was rearranged in less than a second, with column 3 sorted alphabetically column 4 alphabetically and column 1 chronologically, in that order of priority.

# Technical summary

## Keyboard

separate electronic keyboard

### Number of keys

48 (alphanumeric) plus 25 function keys

### Repeat function

automatic on selected characters, all others with repeat key

### Fast cursor movement keys

## Video display unit

### Display

15" screen, adjustable brightness

### Characters

15 x 8 dot matrix  
256 (including multilanguage characters)

### Display size

80 characters per line, 31 lines per page (3 control lines)

### Automatic scroll

94 lines vertical  
249 characters horizontal

### Physical adjustments

rotatable: up, down, left, right

### Dimensions

38 cm (h) x 48 cm (w) x 60 cm (d)

### Weight

19 kg

## Printer

### Daisywheel printer

microprocessor-based, for single sheets or continuous form

### Speed

45 characters/sec., bi-directional

### Printwheel

96 characters, wide choice of typestyles

### Form feed

11", 12" programmable in single-line increments

### Pitch

variable 3 to 13, 15, 17, 20, 24, 30 and 40 characters/inch

### Line spacing

variable in 1/4-line increments

### Printing width

335 mm

### Paper width

381 mm

### Ribbon cassettes

single-strike, multi-strike and fabric (various colours)

### Dimensions

20 cm (h) x 60 cm (w) x 45 cm (d)

### Weight

23 kg

## Central processing unit

ZILOG Z 80A microprocessor  
128000 characters of memory

### Working memory

8000 characters

## Flexible disk unit

### Dual disk unit

for text storage and program load

### Flexible disks

single-sided, hard sectored, 77 tracks, 32 sectors

### Pre-formatted flexible disks

### Capacity

more than 300000 characters, approx. 128 A4 pages

### Pedestal dimensions

67 cm (h) x 58 cm (w) x 52 cm (d)

### Weight

34 kg

## Power requirements

### Voltage

115/220/240 V a.c., 50/60 Hz

### Power consumption

650 VA max.

**A world of service** Philips have been one of the world's major suppliers of office equipment for many years. And this experience is reflected in the superb performance and outstanding ease of operation of the P5003 Flexible Disk Word Processor.

For most suppliers that would be more than enough. But not Philips. Comprehensive after-sales services are provided internationally. So wherever you are, you can rely on Philips to back you up. It's not really surprising therefore that Philips have become a leading supplier of office equipment of all kinds, including office and business computers; terminal systems; personal computers; dictation equipment and systems, pocket memos; and, of course, word processing systems.
